S64

made in **Holland**

- > Low hand/arm vibrations
- > Unsurpassed force of impact
- > Low maintenance cost
- > Low emission

www.samac.nl

Technical specifications

Force of impact 105 kg
Impact energy 90kJ
Stroke 65 cm (depending on surface)
Compaction depth 70cm
Vibration frequency 10-12 Hz
Operating weight 62 kg
Engine Honda GX 100
Fuel petrol
Power output 2.5 kw

S64

The S64 is the most up-to-date rammer on the market, with a user-based design and excellent functionality, quality and outline.

Health benefits for the operator:

The S64 has the lowest HAV (hand-arm vibrations), unmatched by the products of our competitors. As a result of the innovative way in which the clutch is placed, the distribution of weight is optimized. Moreover, built-in shock mount systems and other components have been improved, so vibrations are damped in the machine as much as possible, to increase operator comfort.

Lowest possible emission, partly thanks to the 4 stroke GX 100 Honda engine. In the long term, health benefits for the operator are enormously.

Technical assets of the S64:

- Very powerful compaction due to jumping height
- Easy maintenance. For instance, the clutch is situated on the front and easy to check, just by removing one single cover.
- No unnecessary components, like special air cleaners or catalysts, that make maintenance expensive.
- The width of the machine has been reduced to 36cm, so it takes up less space.
- Noise level below 104 dB (A)
- Fuel: unmixed Euro 95. ASPEN4 is facilitated; please contact us for conditions and further details.
- The four stroke engine is easy to start, whatever the circumstances.
