www.samac.nl

Technical specifications

- Force of impact 62 kg
- Compaction depth 80cm
- Vibration frequency 71 Hz
- Width 75cm
- Operating weight 400 kg
- Engine Hatz
- Type 1 D 50
- Fuel Diesel
- Power output 7.7 kW
- Travel speed 24m/min

REVERSIBLE PLATE TR60

At the introduction of our new house style, the well-known 6 tons vibratory plate was considerably improved.

The **SAMAC TR60** combines good manoeuvrability with excellent compaction. Although its exterior is unchanged, a number of improvements have been made, not just to enhance operator comfort but also to increase durability of wearing parts.

Good manoeuvrability thanks to shifting mechanism which allows for infinitely variable forward and backward travel. **The ease with which this machine can be operated is unequalled.**

Benefits of the TR60:

- robust guide handle in cast aluminium to eliminate vibrations,
- very compact machine (low),
- protective housing of the engine to protect it from falling objects or coarse handling,
- well thought out air flow within the machine to blow out any sand.

Features a powerful strong Hatz 1D50 engine, which is part of the modern Supra line by Hatz.

Available in three plate sizes: 60, 75 or 85cm. And of course we can finish this machine in the colours of your choice.
