Technische aspecten

Size 70 x 55 x 90cm

Powered by a Honda GX160 engine

Equipped with a steering device for easy positioning

Power 4.5 kW

Weight 68 kg

VACUUM UNIT VAC40

The **SAMAC** VAC40 is a vacuum unit which can be built on- or attached to, any machine. As the VAC 40 is independently powered by a Honda petrol engine, there is no need for a hydraulic connection. This simplifies the process of attaching it to- or building it on- another machine.

Moreover, it is also possible to adjust the frame in order to put it on the forks or in the bucket of any wheel loader. In addition, a range of adapters is available which allow for working from different angles.

And of course we can make special adaptations, according to your wishes.

The VAC 40 is developed to simplify installation and to enable you to work according to the regulations of the Health and Safety Executive, at the lowest possible costs.

Please contact us for further details on how the VAC 40 may work for you.
